

Replication Guide for Performance Bug Classification Results

- Set up the environment by following the instructions in the manual.pdf.
- Download the dataset as highlighted in manul.pdf and update the path in baseline.py and SBERT.py.
- Run both baseline.py and SBERT.py across different projects. Results would be downloaded in /results directory.
python baseline.py
python SBERT.py

- Run tests.py to verify results across all projects for different metrics at once.
python tests.py
